

The Acid/Alkaline Balance in Your Body!

The Average Western diet is acid-producing, and actually produces a low-grade systemic acidosis in otherwise healthy people. The vast majority of people experiencing less-than-optimal health or overt illness have pH levels that are overly acidic. Carbonated soft drinks, for example...are among the most acidifying substances found in the supermarket. Researcher Sang Whang, author of the book "Reverse Aging", has found that to neutralize the acidifying effects of one glass of soda, the average person needs to drink thirty two glasses of highly alkaline water to overcome the negative effects of that one glass of soda. The pH of a cola drink, for example, is 2.5, which would actually "kill" you if your body's many defense mechanisms weren't continually trying to keep your body slightly on the alkaline side.

What Can We Do?

In general, the majority of foods you eat at every meal should be alkalizing. You'll want to eat a good amount of fruits, vegetables, nuts, seeds, and spices, with green vegetables and root crops being especially helpful. By contrast, you'll want to minimize your consumption of acidifying foods such as meat, fish, poultry, milk, and dairy products. And you'll want to entirely avoid refined carbohydrates, refined sugar, coffee, sodas, and most highly processed foods, all of which are very acidifying.

If your body is 70 to 80% water, doesn't it make logical sense to hydrate yourself with great tasting, pure, healthy, alkaline water?

For Home & Office The "Waterfall"

- Enhanced filtration certified by the US Water Quality Assn.
- Alkaline water with added minerals pH 8.5 to 9.5
- Ionized water to offset the oxidizing effect of the modern diet. Slows down cellular destruction.
- Turns tap water into great tasting, healthy PiMag water!

Municipal Water Sources

- Most are 80 years out of date. There were 250,000 water line breaks in 2010 alone.
- The Government Accountability Office (GAO) reported the 84% of clean water violations are swept under the rug...
- Recently 11 states had 20 outbreaks because of drinking water problems
- According to the article above...may contain rocket fuel, birth control pills, arsenic, pharmaceuticals and more....

JUST SAY "NO"!

On-the-Go The PiMag "Sport Bottle"

- Less expensive, more practical than commercial bottled water, which is usually acidic in nature
- Laboratory tested to meet or exceed water quality standards.
- Produces alkaline water, pH 8.5 to 9.5, and adds minerals
- Reduces landfill waste, biodegrades to soil-enriching nutrients
- Replaceable filter and drinking spout, approx 40 gallons or 3 months of use for around 5 cents for a 20 oz bottle
- No hazardous chemicals to leach into contents.
